

Stony Brook Road over Stony Brook

MassDOT Project No. 608861

Public Informational Meeting

June 17, 2020

6:00 PM

Introductions

- TEC, Inc. – Engineering Consultant for MassDOT
 - Panelists: Bob Niccoli, Jody Trunfio, Jake Carmody
- Town of Westford – Bridge Owner
 - Panelists: Paul Starratt, Jeremy Downs, Steve Cronin
- Residents of the Town of Westford – **Welcome!!**

Agenda

- Project Background
- Existing Conditions
- Project Goals
- Evaluation Criteria
- Alternatives Analysis
- Next Steps
- Questions

Agenda

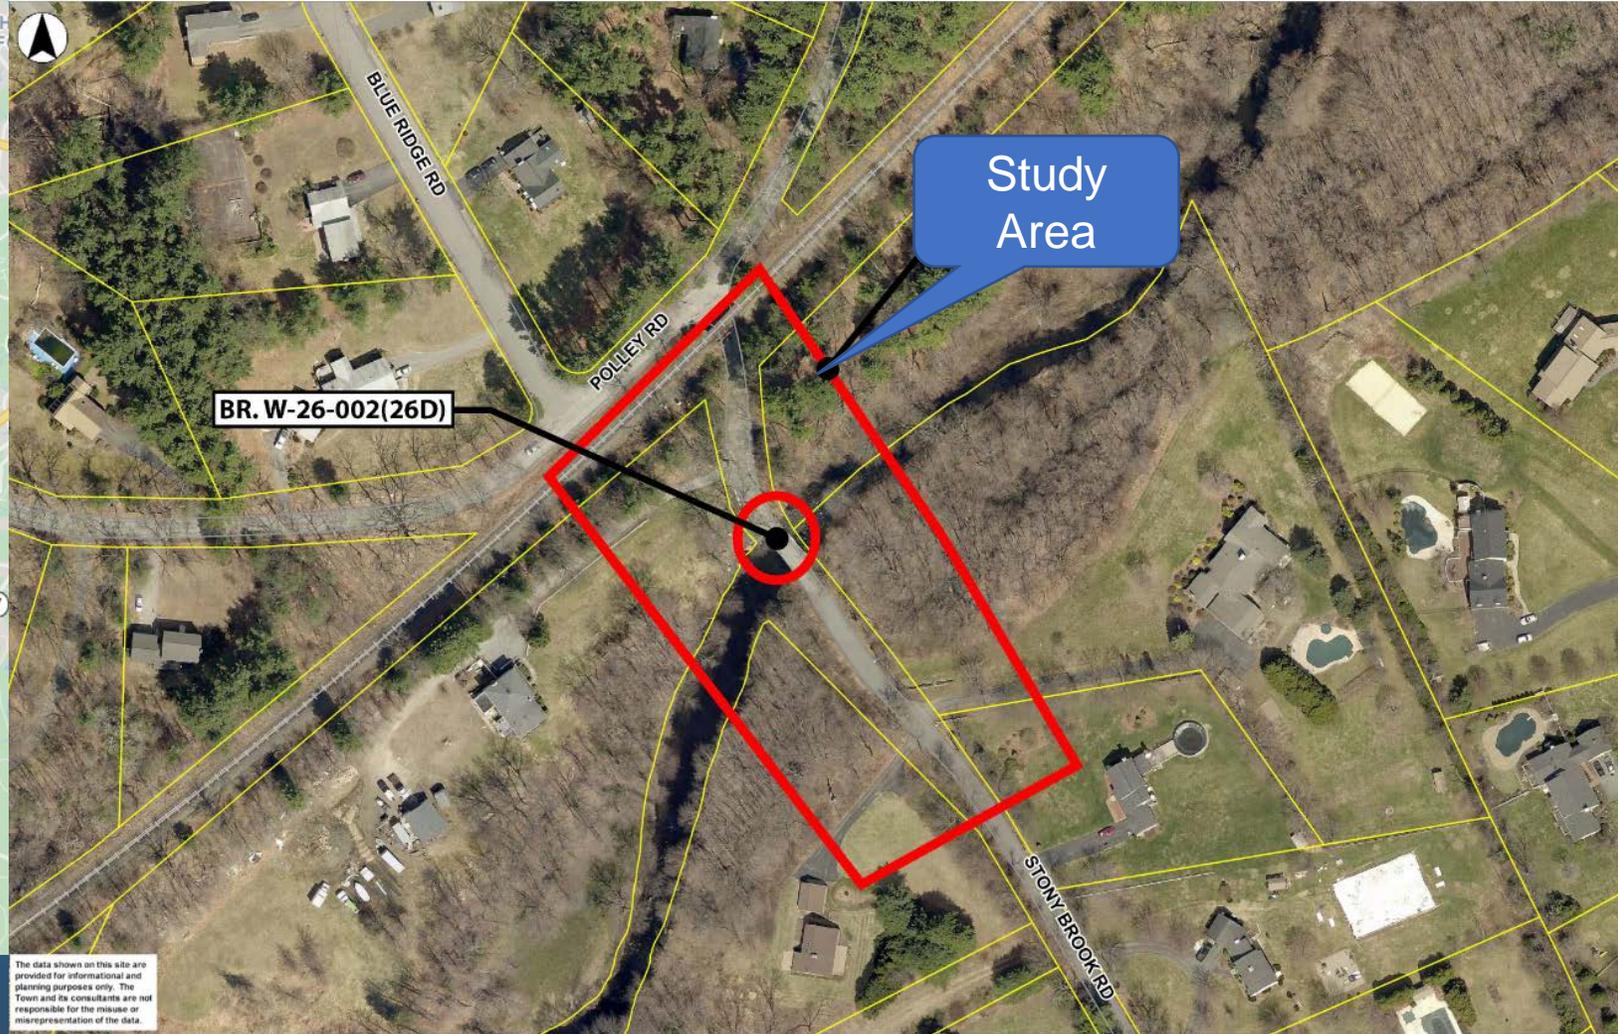

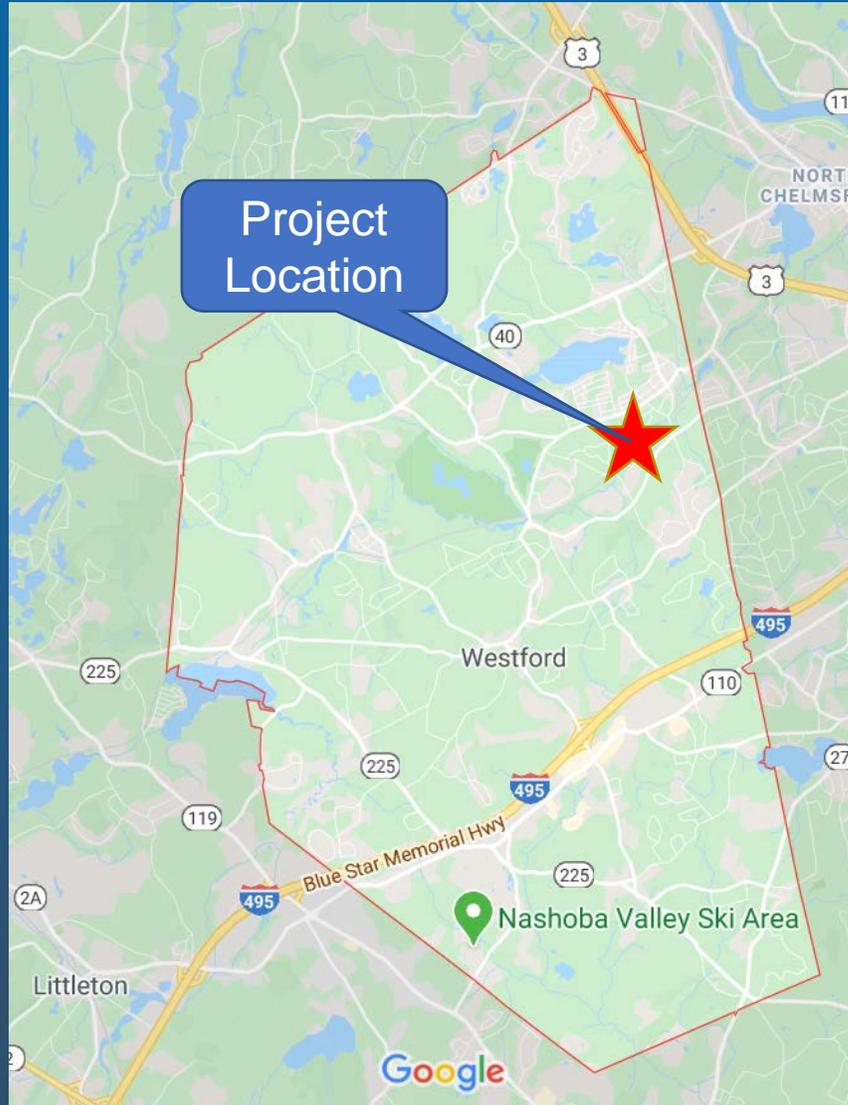

- **Project Background**
- Existing Conditions
- Project Goals
- Evaluation Criteria
- Alternatives Analysis
- Next Steps
- Questions

Project Background

- MassDOT responsible for performing inspections on bridges every 2 years and reporting to municipality for town-owned structures
- Results of inspections (i.e. deficiencies) could lead to programmed projects on the state's Transportation Improvement Program
- Stony Brook Bridge identified for Federal Fiscal Year 2022 construction action
- MassDOT hired TEC to evaluate alternatives for addressing bridge deficiencies

Project Background

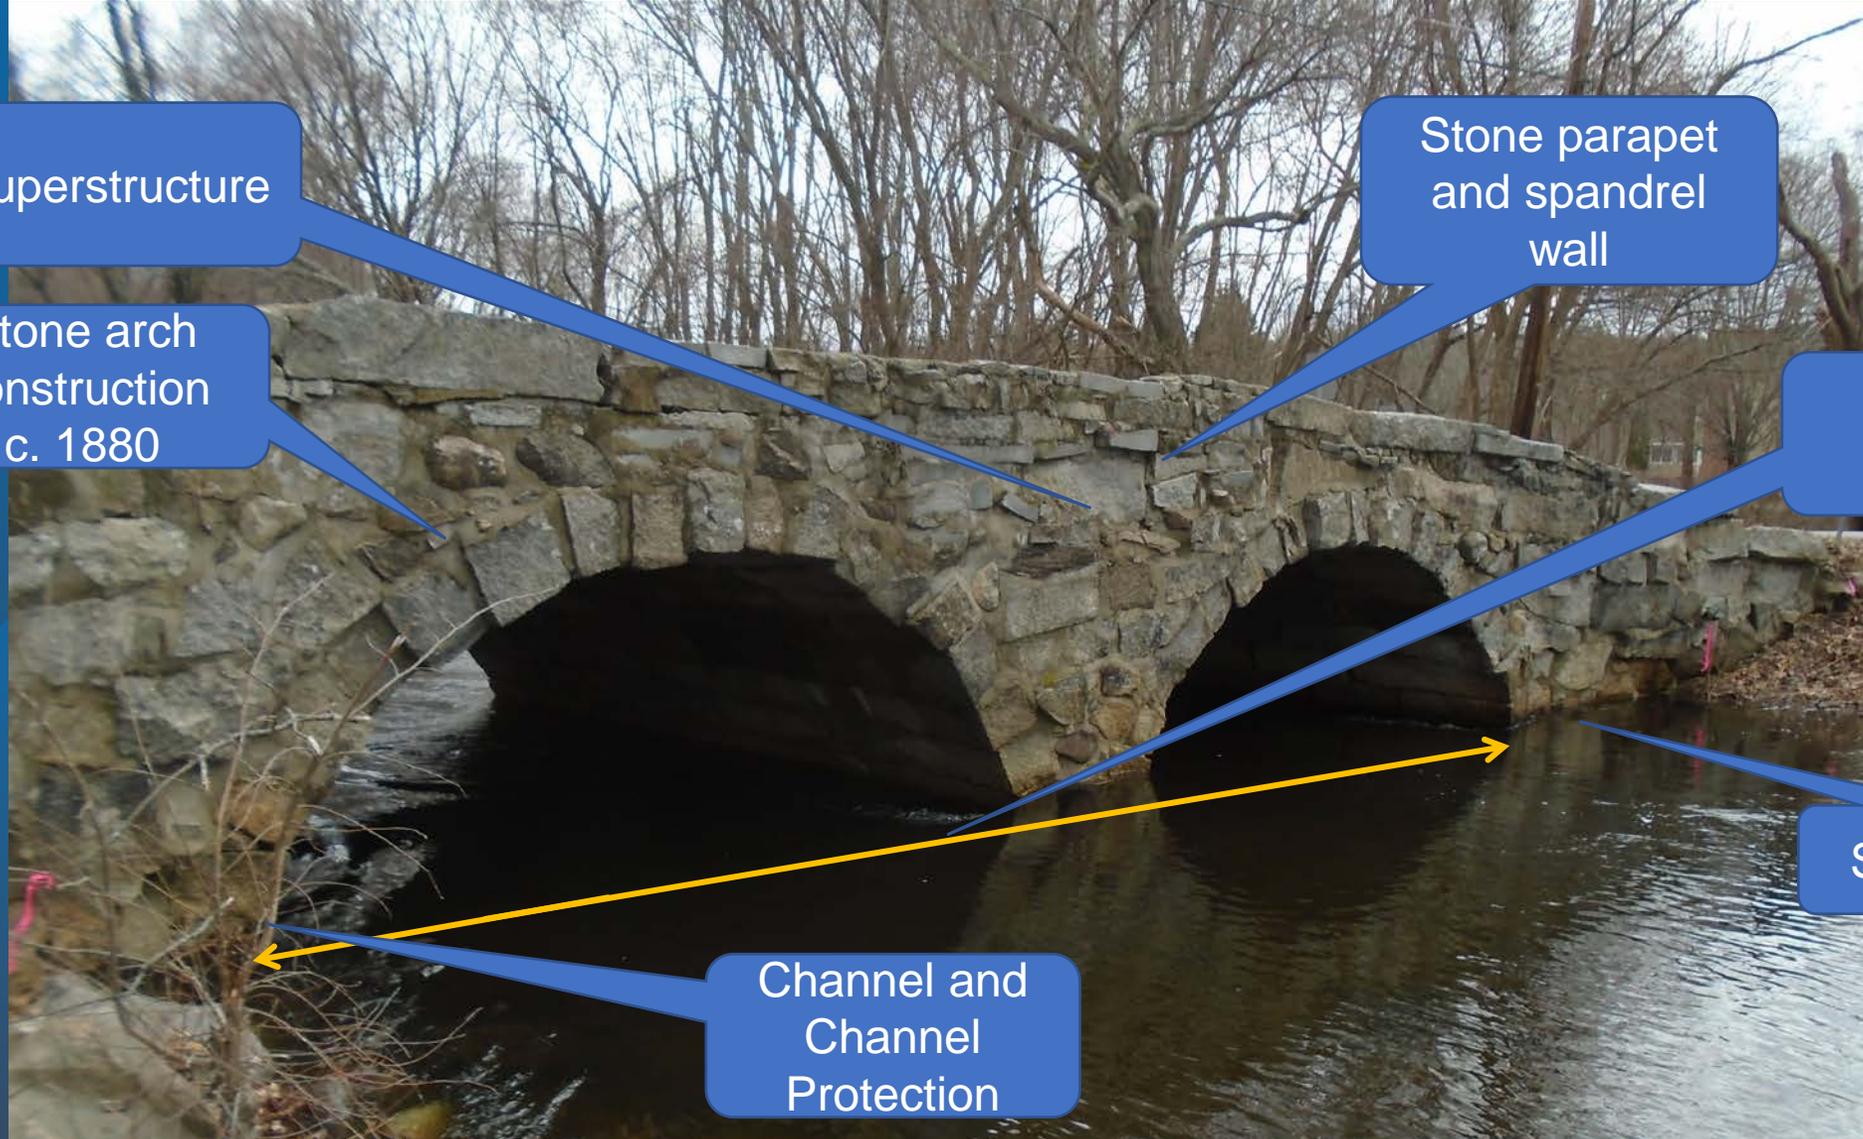

The data shown on this site are provided for informational and planning purposes only. The Town and its consultants are not responsible for the misuse or misrepresentation of the data.

Agenda

- Project Background
- **Existing Conditions**
- Project Goals
- Evaluation Criteria
- Alternatives Analysis
- Next Steps
- Questions

Existing Conditions - Bridge

Superstructure

Stone arch construction
c. 1880

Stone parapet
and spandrel
wall

30' water
crossing

Substructure

Channel and
Channel
Protection

Existing Conditions - Roadway

Substandard parapet height

Narrow road for two way travel
~15'

Existing Conditions - Access

Low clearance
access to Stony
Brook Road

Existing Conditions

Range: 0-9

Structural Element	Rating	Description
Superstructure:	5	<ul style="list-style-type: none"> ➤ FAIR – All primary structural elements are sound but may have minor section loss, cracking, spalling or scour.
Substructure:	6	<ul style="list-style-type: none"> ➤ SATISFACTORY – Structural elements show some minor deterioration.
Channel & Channel Protection	7	<ul style="list-style-type: none"> ➤ GOOD – Some minor problems.

Takeaway – Bridge is potential candidate for rehabilitation; consider alternatives

Existing Conditions – Property

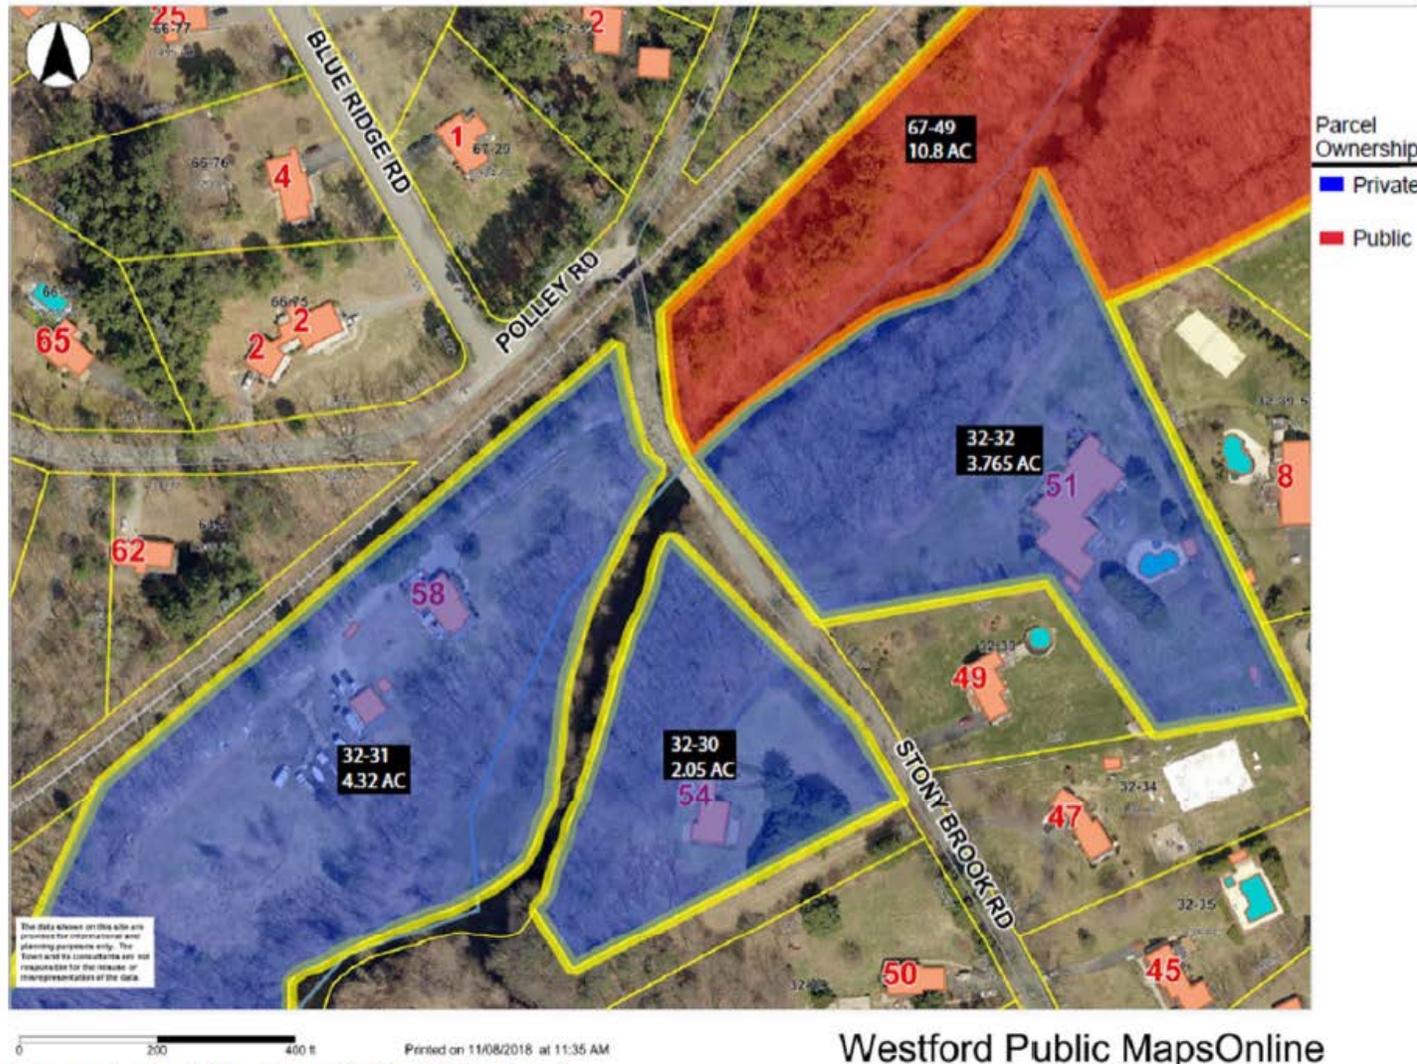

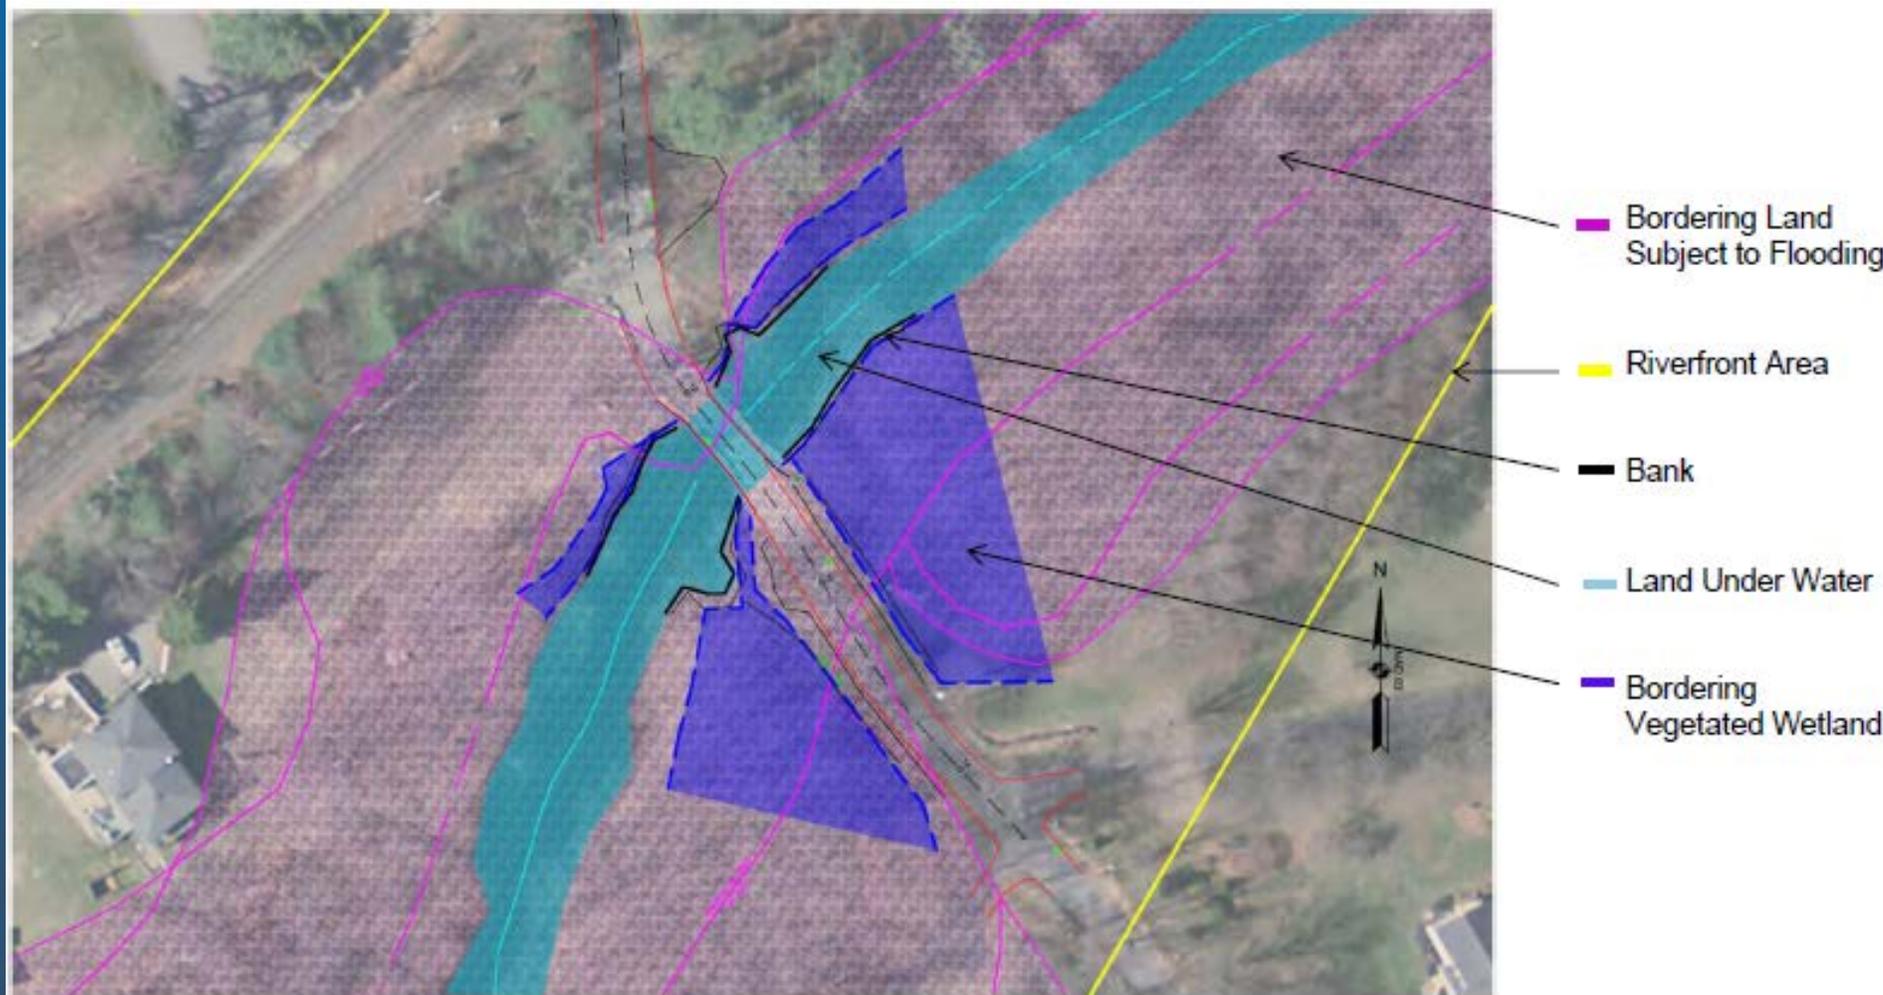

Figure 3: Surrounding Parcels Map (Source: Westford, MA GIS Viewer)

- Surrounding areas include private residences, wetlands, and one parcel owned by Westford Conservation Commission

Existing Conditions - Environmental Resources

- Resource Areas adjacent to project site that are subject to local, state, and federal regulations

Existing Conditions - Environmental Resources

National Flood Hazard Layer FIRMeta

Legend

SEE HIS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

SPECIAL FLOOD HAZARD AREAS	Without Base Flood Elevation (BFE) Zone A, V, AO, D With BFE or Depth Regulatory Floodway Zone AE, AO, AV, VE, AP
0.2% Annual Chance Flood Hazard, Areas of 1% annual chance Flood with average depth less than one foot or with drainage areas of less than one square mile Zone X	
Future Conditions 2% Annual Chance Flood Hazard Zone X	
Area with Reduced Flood Risk due to Levee. See Notes. Zone X	
Area with Flood Risk due to Levee. Zone D	
Area of Minimal Flood Hazard Zone X	
Effective LOMRs	
Area of Undetermined Flood Hazard Zone D	
Channel, Culvert, or Storm Sewer	
Levee, Dike, or Floodwall	
Cross Sections with 1% Annual Chance Water Surface Elevation	
Coastal Transect	
Base Flood Elevation Line (BFE)	
Limit of Study	
Jurisdiction Boundary	
Coastal Transect Baseline	
Profile Baseline	
Hydrographic Feature	
Digital Data Available	
No Digital Data Available	
Unmapped	

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The base map shown complies with FEMA's base map accuracy standards.

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/1/2018 at 10:28:22 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: base map imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas can not be used for regulatory purposes.

- The bridge is located in a FEMA regulatory flood area

Existing Conditions - Historic Resources

- Stony Brook Bridge is listed as a historic site on both the Massachusetts Cultural Resource Information System (MACRIS) and the national Register of Historic Places
- Stony Brook is listed as a scenic road by the Town of Westford

Massachusetts Cultural Resource Information System **MACRIS**

MACRIS Search Results

Search Criteria: Town(s): Westford; Street Name: Stony Brook; Resource Type(s): Area, Building, Burial Ground, Object, Structure;

Inv. No.	Property Name	Street	Town	Year
WSR.926	Stony Brook Bridge	Stony Brook	Westford	1988

Agenda

- Project Background
- Existing Conditions
- **Project Goals**
- Evaluation Criteria
- Alternatives Analysis
- Next Steps
- Questions

Project Goals

- ✓ Increase **traffic safety** along the bridge
- ✓ Increase the **load carrying capacity** of the bridge
- ✓ Reduce impacts to **abutting properties**
- ✓ Reduce impacts to **environmentally sensitive areas**
- ✓ Maintain **historic appearance** within the project limits

Agenda

- Project Background
- Existing Conditions
- Project Goals
- **Evaluation Criteria**
- Alternatives Analysis
- Next Steps
- Questions

Evaluation Criteria

- Traffic Safety
- Preserve the Historic Aesthetic of the Bridge
- Extending the service life of the Bridge
- Environmental Impacts
- Right of Way and Property Impacts
- Cost

*****Each Criterion was scored ranging 1 (Poor) to 5 (Excellent) with total aggregate score identifying the preferred engineering alternative***

Agenda

- Project Background
- Existing Conditions
- Project Goals
- Evaluation Criteria
- **Alternatives Analysis**
- Next Steps
- Questions

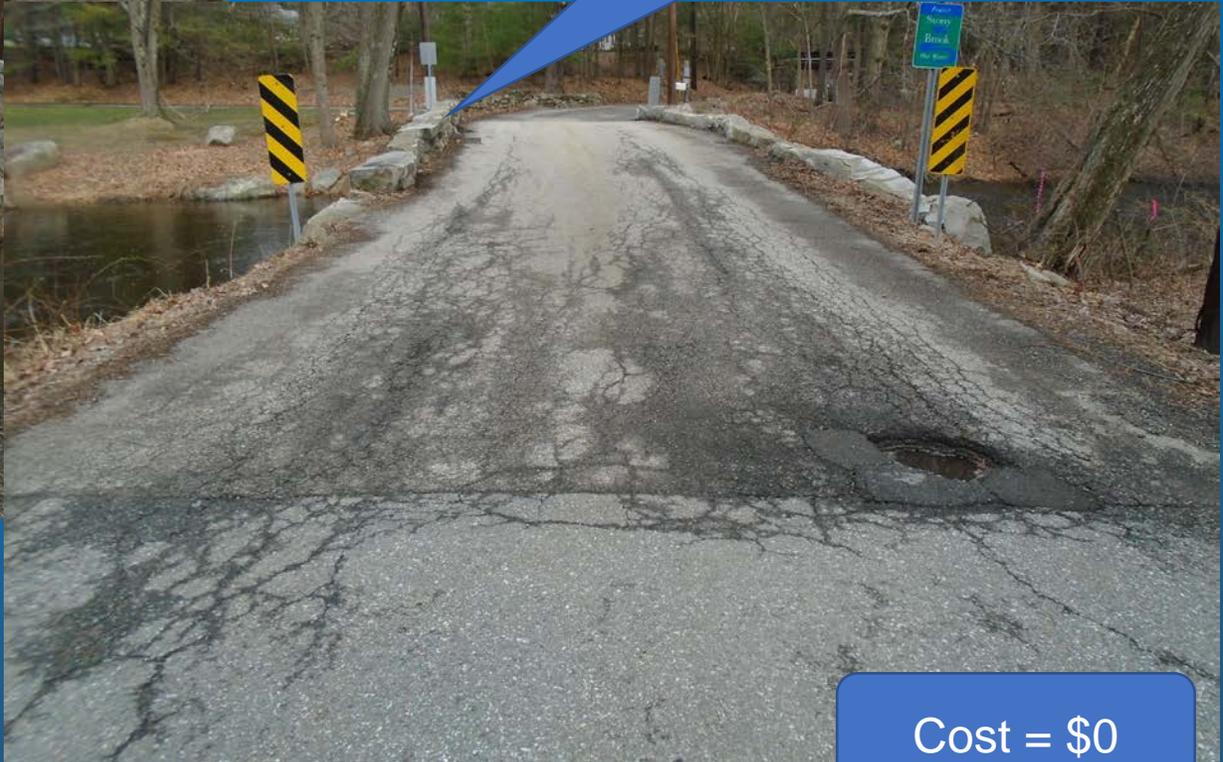

Alternatives Analysis

- Alternative 1: No-Build
- Alternative 2: Preservation
- Alternative 3: Replacement
- Alternative 4: New Adjacent Bridge
 - use current bridge for pedestrians only

Alternative 1 – No-Build

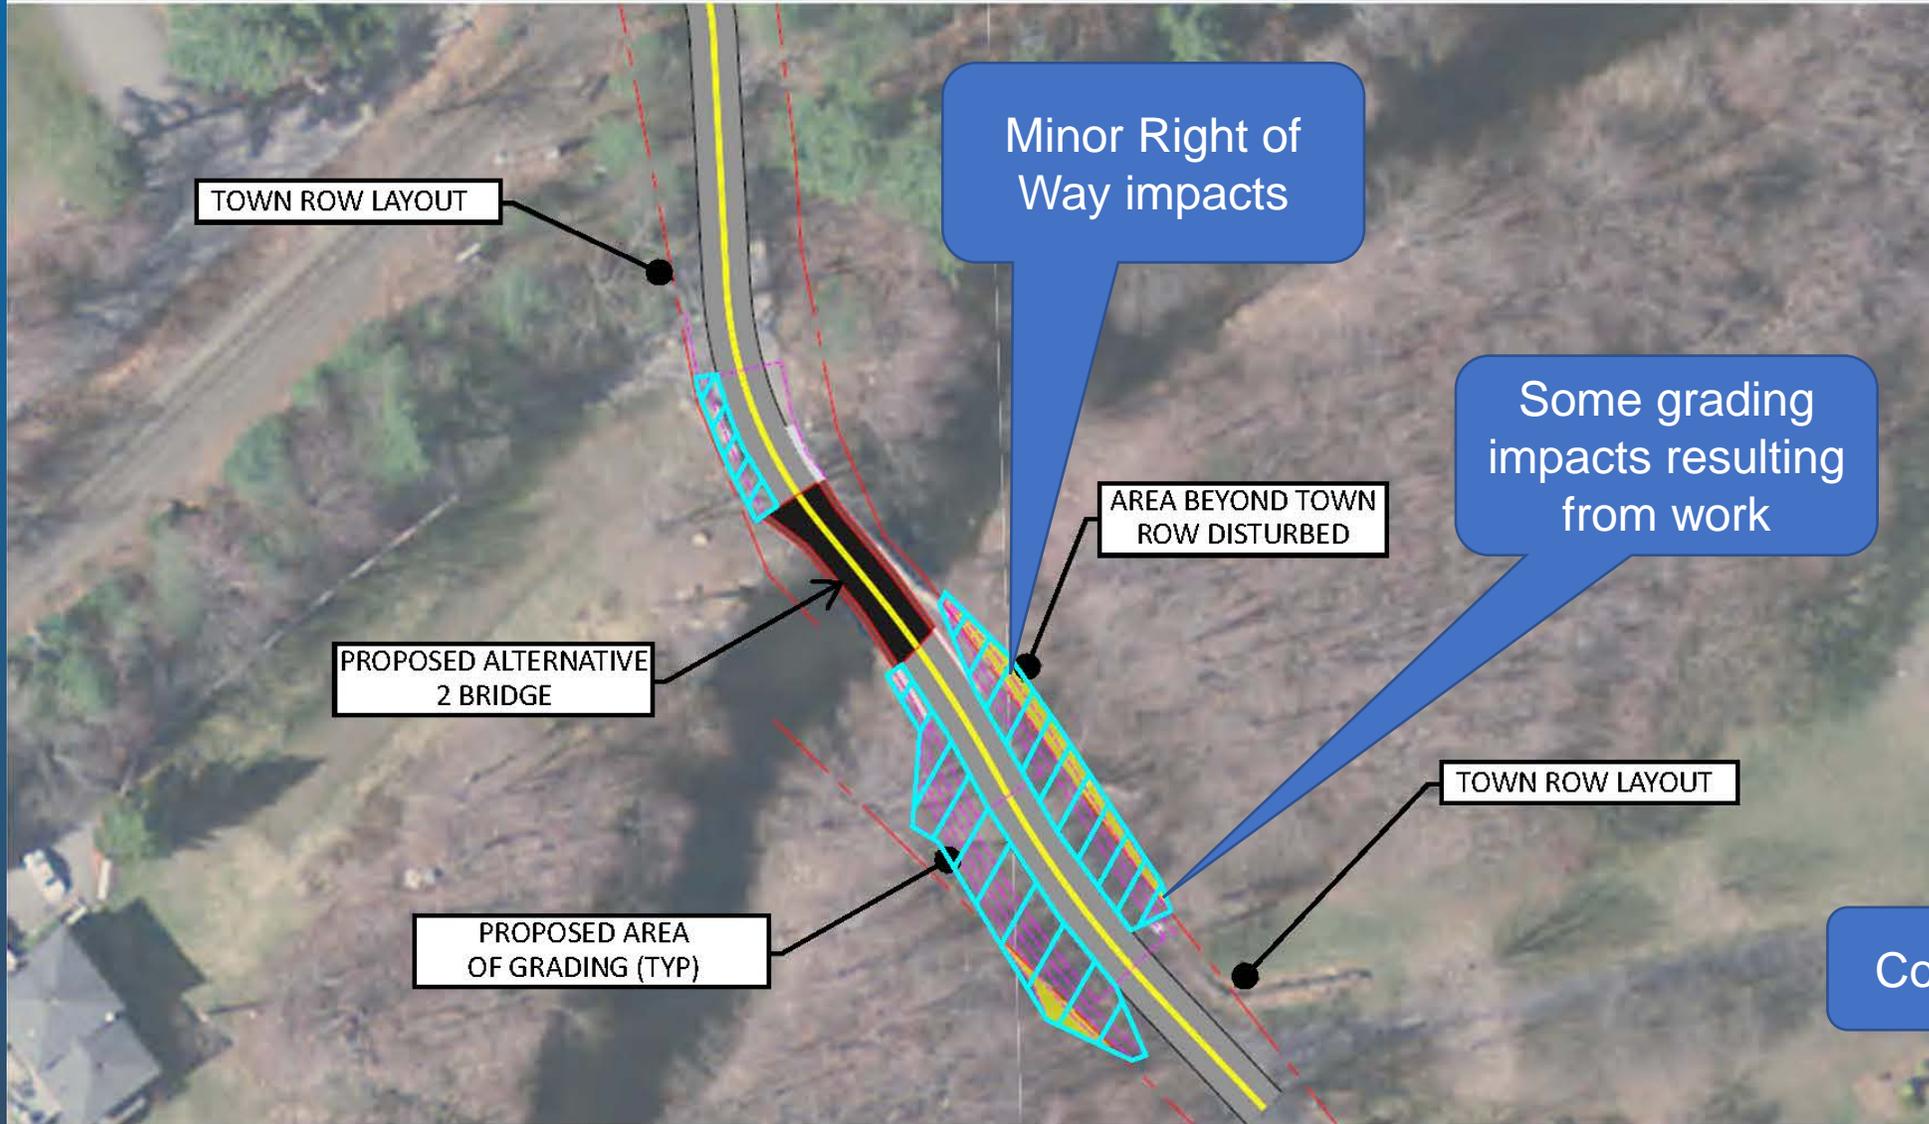

Reduced bridge capacity remains in place

Non-compliant issues remain

Cost = \$0

Alternative 2 - Preservation

LEGEND:

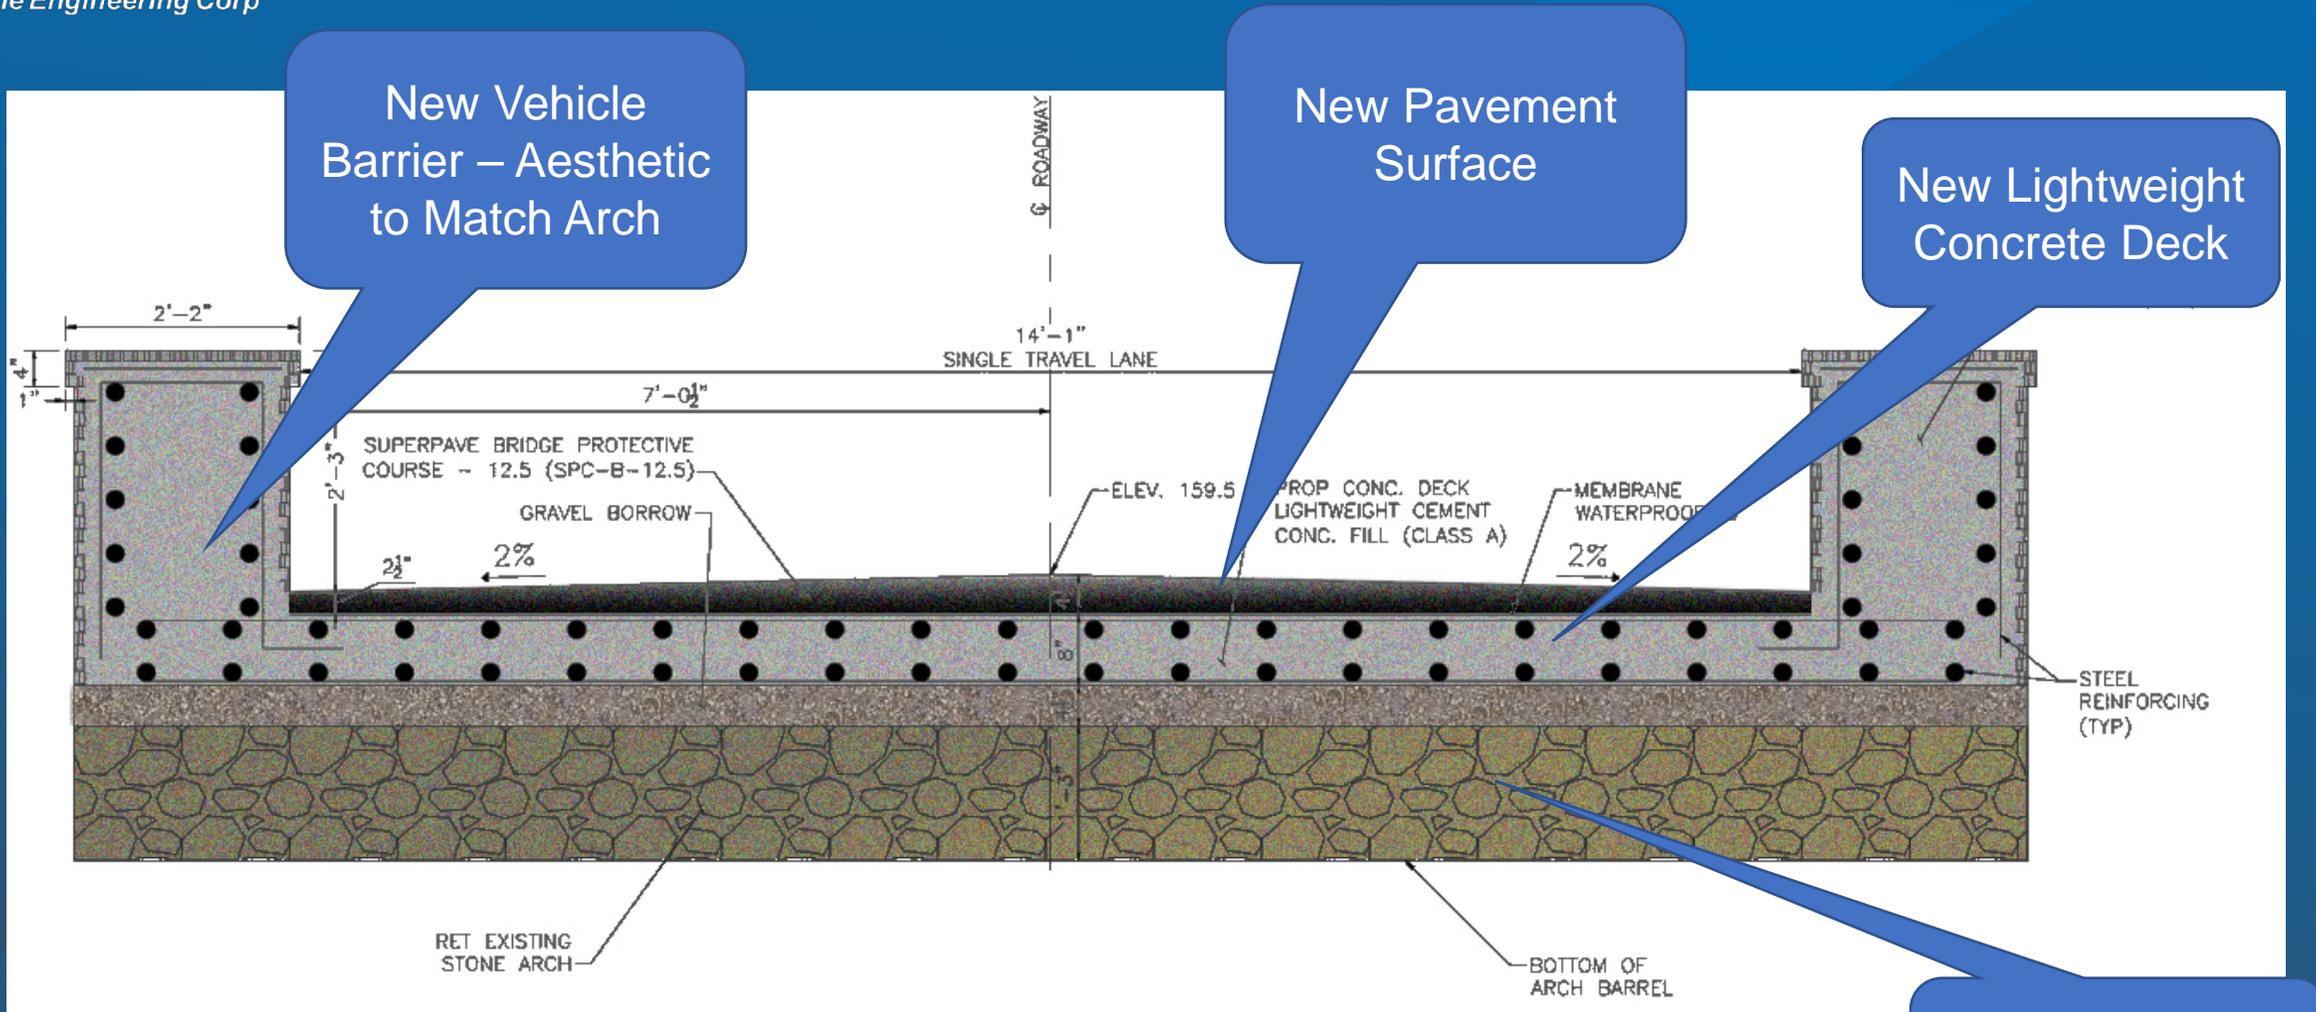

-  Grading Impact
-  ROW Impact

SUMMARY:

- 2500 SF of grading.
- 700 SF of permanent easements.

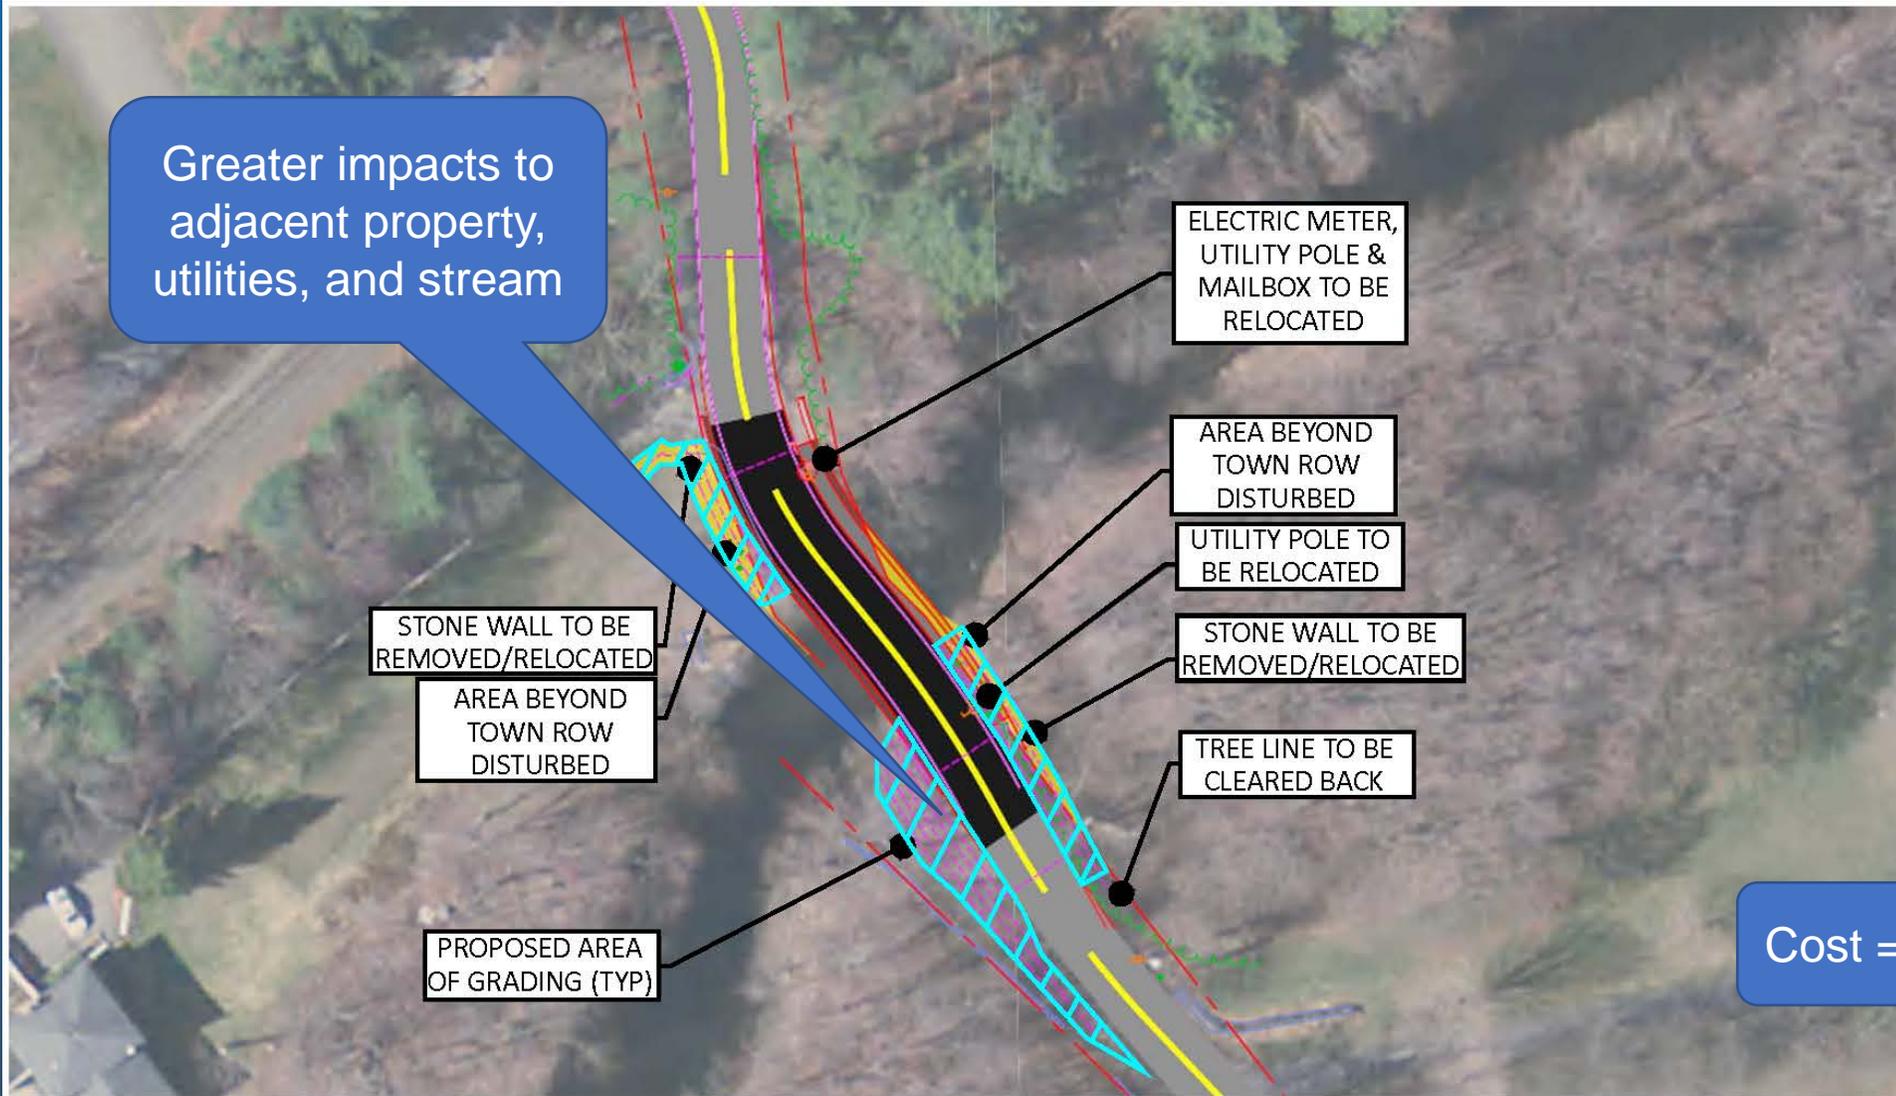

Cost = \$500,000

Alternative 2 – Preferred Alternative

Minor Repairs to Stone Arch

Alternative 3 - Replacement

LEGEND:

-  Grading Impact
-  ROW Impact

SUMMARY:

- 2500 SF of grading.
- 1150 SF of permanent easements.
- 3300 SF of streambed restoration

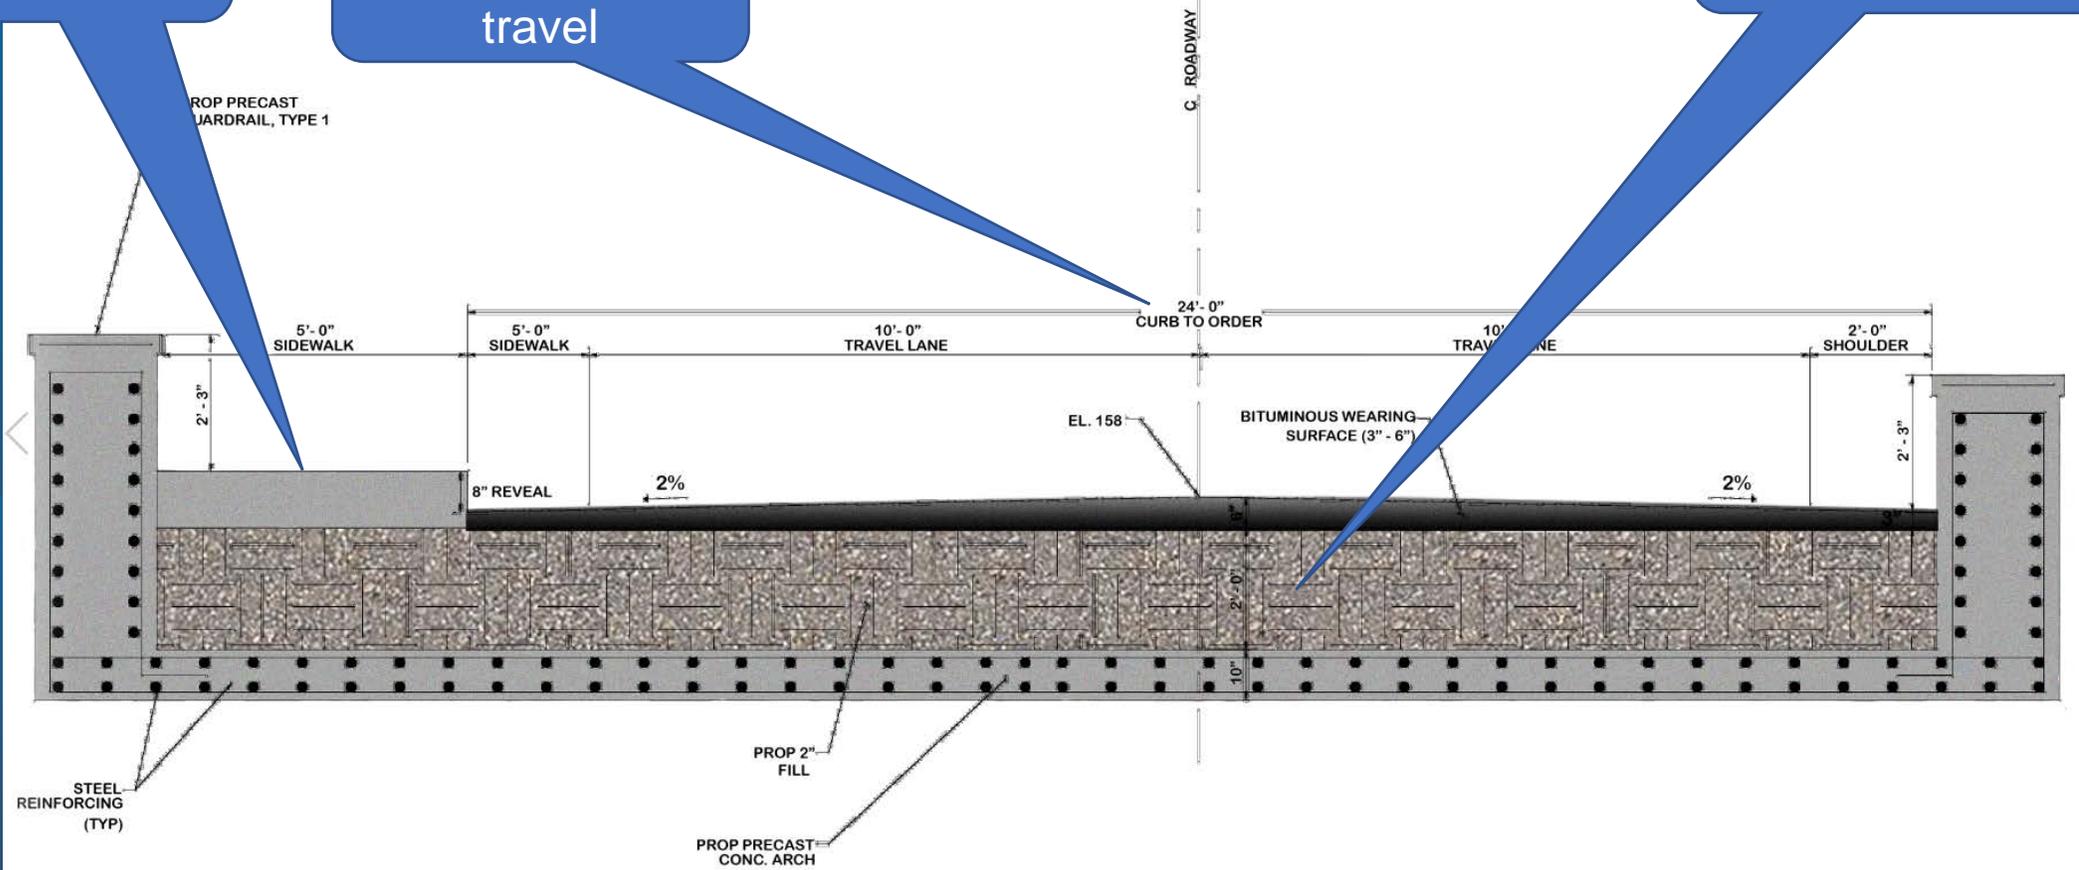

Cost = \$2,225,000

Alternative 3 - Replacement

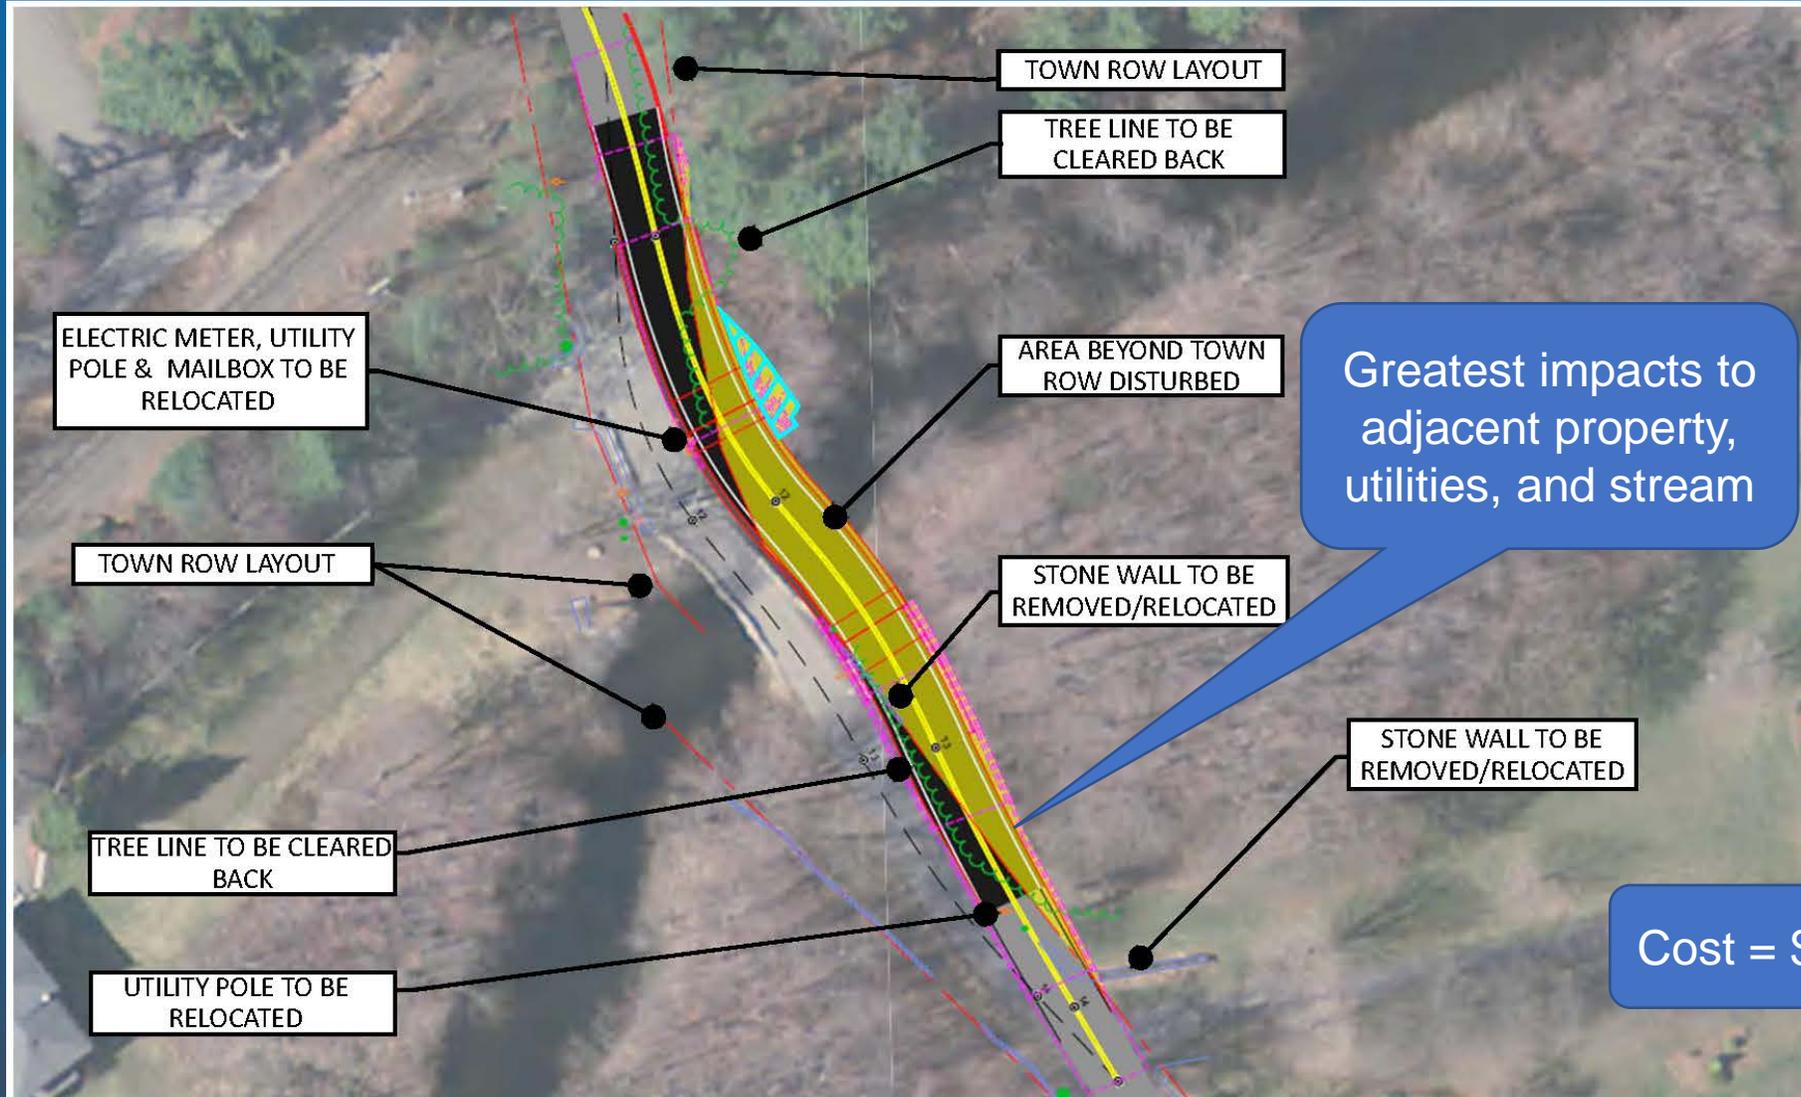

Pedestrian Separation

Wider Roadway for two-way travel

New Precast Concrete Structure

Alternative 4 – New Adjacent Bridge to Existing Bridge

LEGEND:

-  Grading Impact
-  ROW Impact

SUMMARY:

- 1500 SF of grading.
- 5300 SF of permanent easements.
- 2800 SF of brush clearing.

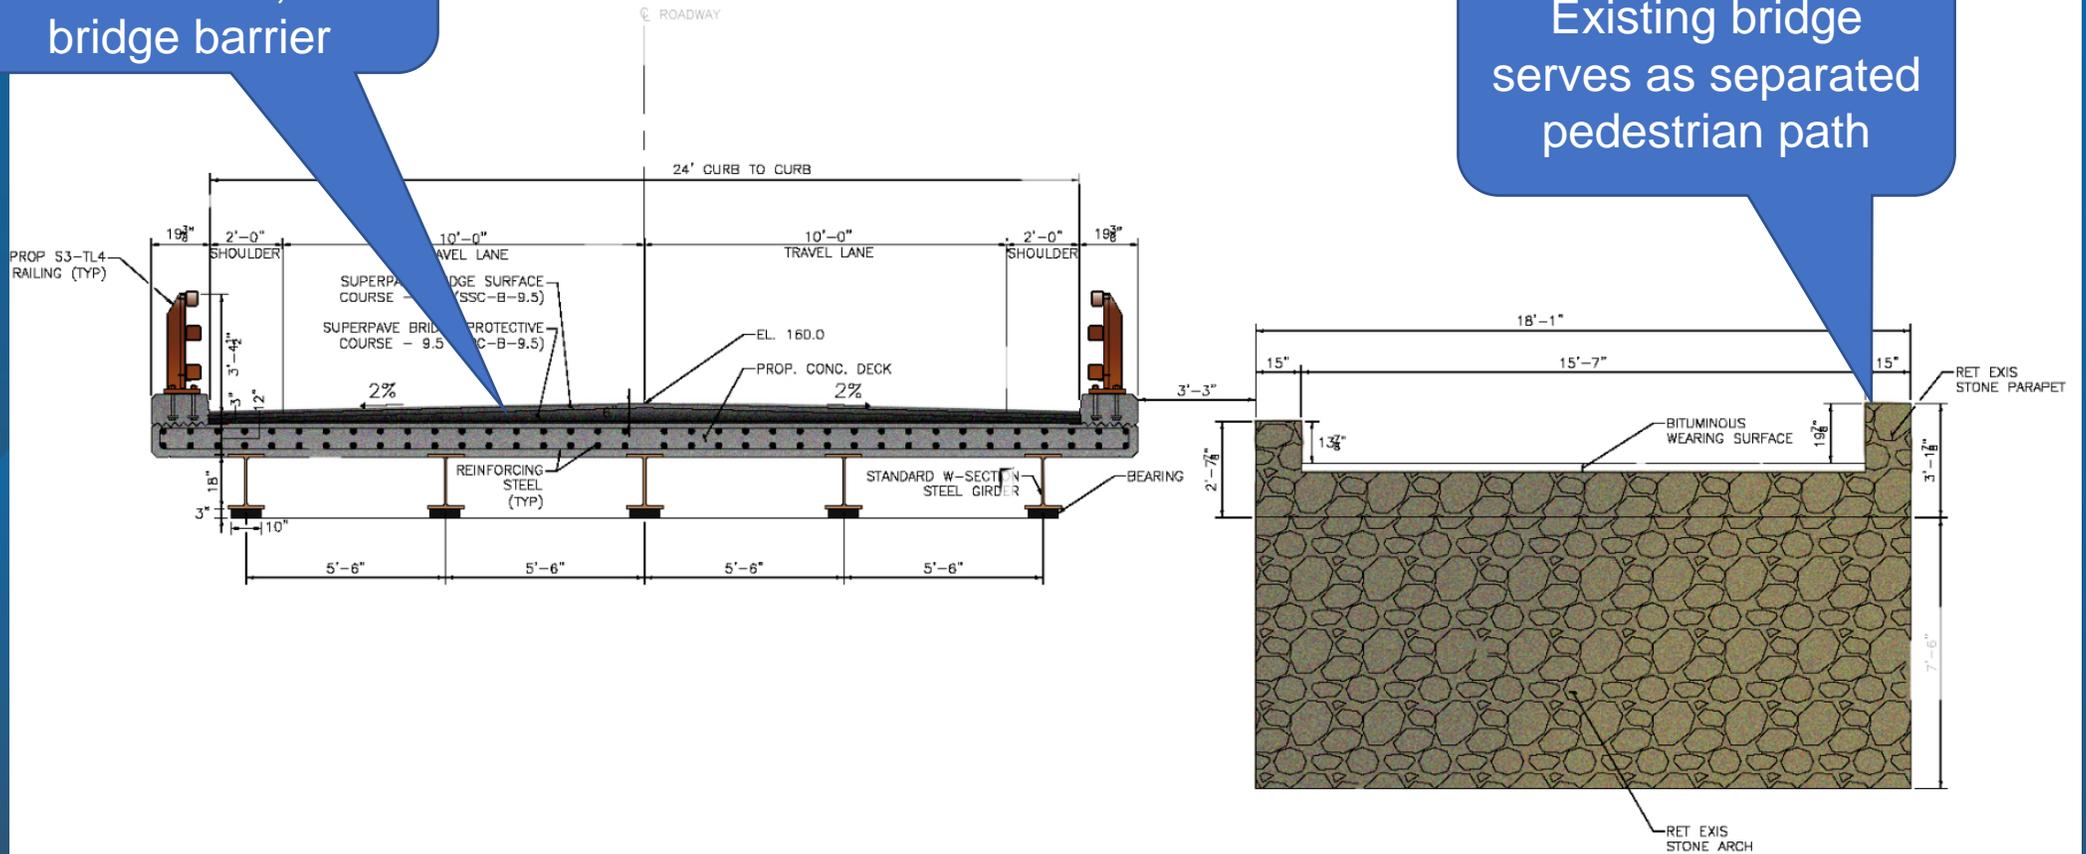

Greatest impacts to adjacent property, utilities, and stream

Cost = \$2,350,000

Alternative 4 – New Adjacent Bridge to Existing Bridge

New vehicular bridge; steel beams, concrete deck, steel bridge barrier

Existing bridge serves as separated pedestrian path

Evaluation Matrix

Table 4: Alternative Evaluation Criteria Scoring

Evaluation Criteria	Alternative 1 – No Build		Alternative 2 – Preservation		Alternative 3 – Replacement		Alternative 4 – New Adjacent Bridge	
	Score	Notes	Score	Notes	Score	Notes	Score	Notes
Cost	5	\$0 - No action taken.	4	\$500,000 – Does not account for a temporary bridge or resident relocation.	2	\$2,225,000 – Does not account for a temporary bridge or resident relocation.	1	\$2,350,000 – Does not account for a temporary bridge or resident relocation.
Improve Overall Safety of the Bridge	1	Does not improve any of the existing safety issues.	3	Would improve the existing bridge railing but would still have a single lane for vehicular traffic and shared pedestrian traffic.	5	Would provide code compliant bridge rail for vehicle & pedestrian protection, two vehicular travel lanes & separate pedestrian area.	4	Would provide code compliant bridge rail for vehicles, but no handrail for
Extend the Bridge's Service Life	1	Does not improve the existing structure's load carrying ability.	4	Improved load distribution and other minor repairs would extend the service life significantly.	5	Would replace the existing bridge with a new bridge.	5	
Preserve the Historic Aesthetic of the Bridge	5	Leaves the existing bridge undisturbed.	4	Would retain the arch structure and replicate the existing bridge rail with a more aesthetically appealing precast concrete barrier with stone face.	3	Will replicate the existing bridge's geometry and aesthetic look as much as feasible.	3	bridge to not replicate historic
Limit Environmental Impacts	5	Would not result in any construction or environmental disturbance.	4	Keep proposed bridge footprint within existing, only permanent impact is approach grading (2500 SF).	2	Results in a wider bridge footprint than existing, streambed & wetland disturbance and approach grading (2500 SF).	1	Would add a new adjacent bridge which would result in significant wetlands and streambed disturbance, and grading (1500 SF – up to 6 feet).
Limit Right of Way/Property Impacts	5	Would not require any easements.	4	Would require 700 SF of permanent easements, no permanent impact to abutters.	2	Would require 1150 SF of permanent easements, and some permanent impacts to abutters.	1	Would require 5300 SF of permanent easements & have permanent impacts to abutters.
Sum	22	TEC recommends this alternative be discarded from consideration due to its safety concerns.	23	TEC recommends this alternative be selected for further investigation. It improves the major concern of safety for a significantly lower cost than Alternatives 3 & 4.	20	TEC recommends this alternative not be selected due to its significantly greater associated cost compared to Alternative 2.	15	TEC recommends this alternative not be selected due to its low score and significantly greater site impacts and cost compared to Alternative 2.

Alternative scored with highest score identified as preferred alternative

Scoring Scale 1-5:

1 – Poor 2 – Fair 3 – Satisfactory 4 – Good 5 – Excellent

Preferred Alternative - Preservation

Minor repairs to
stone arch

New vehicle
barrier – aesthetic
to match arch

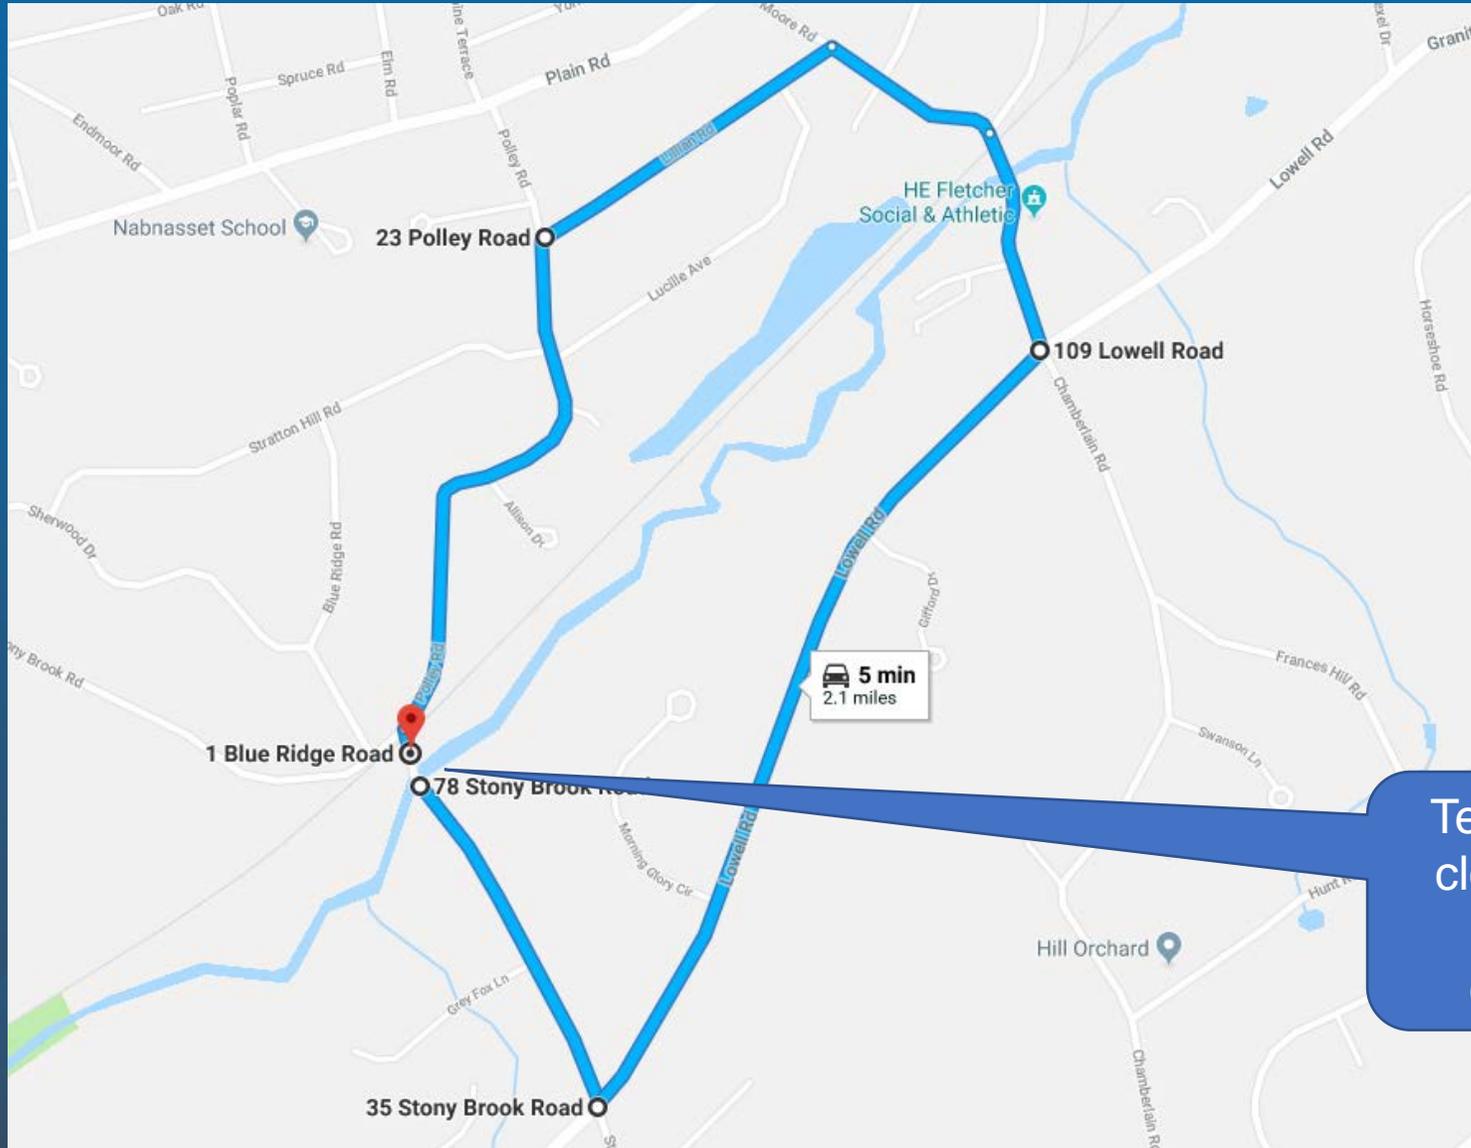

Preferred Alternative - Preservation

New vehicle barrier – aesthetic to match arch

New Pavement Surface

Detour Route – 2 miles; 5 minutes

- Emergency response coordination conducted with Town
- Low clearance at RR bridge not a concern at this time

Temporary road closure needed during construction

Agenda

- Project Background
- Existing Conditions
- Project Goals
- Evaluation Criteria
- Alternatives Analysis
- **Next Steps**
- Questions

Next Steps

- Incorporate public feedback into Final Alternatives Analysis Report
- Proceed with 25% Design
- Conduct Design Public Hearing with MassDOT after 25% design is completed.
 - Date: TBD
- Project advertised in 2022; Construction to begin in 2023.

Questions ?
